

London Evolutionary Research Network Invitation for Speakers

Evolutionary Modelling: Postgraduate Session

What's the difference between the process of evolution in a computer and the process of evolution outside the computer? The entities that are being evolved are made of different stuff, but the process is identical.... These abstract computer processes make it possible to pose and answer questions about evolution that are not answerable if all one has to work with is the fossil record and fruit flies. — Christopher Langton

This post-graduate session provides an opportunity for students working in the field of evolutionary modelling to present their research in a relaxed atmosphere to an audience of fellow students. There will be three talks of 15 minutes, with 5 minutes each for questions.

To submit an abstract, or for more details, please email Hugo Parker at: h.parker@qmul.ac.uk.

18:00, Tuesday 12th February 2008

LOCATION

(To be confirmed)
University College London
WC1E 6BT
